

COLOUR PROCEDURES FROM INDESIGNCS APPLICATION Quebecor World

PURPOSE: To create PDF files from InDesignCS application files for quality digital printing at Quebecor.
SCOPE: Involves file preparation according to the Quebecor World prepress standard work flow.

When exporting your PDF, under “Advanced”, select “Ink Manager”. If all colours are to be CMYK, click on “All Spots to Process”.

If the file will be printing with spot colours and 2 have similar names (i.e.: Reflex Blue C and Reflex Blue U), select one of the similarly named spots, click on “Ink Alias”, select the other similarly named spot. This will tie the two together as one spot colour.
